

# Stronger foundations for the modern grid.

**Polecrete® Stabilizer** is a two-part polyurethane foam backfill solution that improves load transfer, soil interaction, and long-term structural performance.

**Polecrete®**  
**STABILIZER**

## Built for grid modernization demands.

Utility companies are modernizing the grid while managing aging poles, rapid expansion, and rising load demand. More pole changeouts, reinforcement, and storm restoration work is happening under tighter timelines and resource constraints, often in remote terrain where access and logistics add cost and complexity.

**Polecrete® Stabilizer** supports these conditions with a rapid-install, field-proven foundation solution that strengthens pole performance, delivers consistent results, and is built to handle higher loading as grid requirements evolve.

## Consistent results across regions.

**Polecrete® Stabilizer** supports standardized foundation practices across pole changeout, reinforcement, and restoration efforts, helping utilities reduce variation between crews, districts, and contractors. This single, spec-ready solution simplifies material selection and ordering, supports more uniform training and execution, and helps organizations deploy the same approach across large service territories.

## Faster installation, reliable performance.

**Polecrete® Stabilizer** sets rapidly to deliver a faster, more consistent foundation without the heavy hauling or multiple compaction steps required by conventional backfill. Field tested and proven in challenging and remote conditions, including extreme temperatures and saturated ground, it strengthens the foundation and supports stable pole performance under higher demands.

## Field performance highlights.

- ✔ Expands up to 15x to fill voids and stabilize soil
- ✔ Sets in 15 minutes and is climb-ready in about 30
- ✔ Protects poles from ground-line decay and damage
- ✔ Stays solid for years even in wet or marshy areas
- ✔ Helps limit wood-treatment contamination of surrounding soil
- ✔ 24-month shelf life when unopened
